About this Manual

This manual is intended for service personnel who have completed sufficient training to undertake the maintenance and inspection of personal computers.

It is organized to allow you to look up basic information for servicing and/or upgrading components of the *P375SM/P375SMF* series notebook PC.

The following information is included:

Chapter 1, Introduction, provides general information about the location of system elements and their specifications.

Chapter 2, Disassembly, provides step-by-step instructions for disassembling parts and subsystems and how to upgrade elements of the system.

Appendix A, Part Lists

Appendix B, Schematic Diagrams

IMPORTANT SAFETY INSTRUCTIONS

Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit (Full Range AC/DC Adapter – AC Input 100 - 240V, 50 - 60Hz, DC Output 19.5V, 16.9A (330W) minimum).

This Computer's Optical Device is a Laser Class 1 Product

Instructions for Care and Operation

The notebook computer is quite rugged, but it can be damaged. To prevent this, follow these suggestions:

1. **Don't drop it, or expose it to shock.** If the computer falls, the case and the components could be damaged.

2. **Keep it dry, and don't overheat it.** Keep the computer and power supply away from any kind of heating element. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.

3. **Follow the proper working procedures for the computer.** Shut the computer down properly and don't forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.

4. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.
5. **Take care when using peripheral devices.**

Power Safety

The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies.

Power Safety Warning

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines and power cord).

You must also remove your battery in order to prevent accidentally turning the machine on. **Before removing the battery disconnect the AC/DC adapter from the computer.**

Battery Precautions

- Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
- Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
- Recharge the batteries using the notebook's system. Incorrect recharging may make the battery explode.
- Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
- Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
- Keep the battery away from metal appliances.
- Affix tape to the battery contacts before disposing of the battery.
- Do not touch the battery contacts with your hands or metal objects.

Battery Guidelines

The following can also apply to any backup batteries you may have.

- If you do not use the battery for an extended period, then remove the battery from the computer for storage.
- Before removing the battery for storage charge it to 60% - 70%.
- Check stored batteries at least every 3 months and charge them to 60% - 70%.

Battery Disposal

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Caution

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer's instructions.

Battery Level

Click the battery icon  in the taskbar to see the current battery level and charge status. A battery that drops below a level of 10% will not allow the computer to boot up. Make sure that any battery that drops below 10% is recharged within one week.

Related Documents

You may also need to consult the following manual for additional information:

User's Manual on CD

This describes the notebook PC's features and the procedures for operating the computer and its ROM-based setup program. It also describes the installation and operation of the utility programs provided with the notebook PC.

System Startup

1. Remove all packing materials, and place the computer on a stable surface.
2. Insert the battery and make sure it is locked in position.
3. Securely attach any peripherals you want to use with the notebook (e.g. keyboard and mouse) to their ports.
4. Attach the AC/DC adapter to the DC-In jack at the rear of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter.
5. Use one hand to raise the lid/LCD to a comfortable viewing angle (it is preferable not to exceed 135 degrees); use the other hand to support the base of the computer (**Note: Never** lift the computer by the lid/LCD).
6. Raise the lid/LCD to a comfortable viewing angle, and press the power button.

Chapter 1: Introduction

Overview

This manual covers the information you need to service or upgrade the *P375SM/P375SMF* series notebook computer. Information about operating the computer (e.g. getting started, and the *Setup* utility) is in the *User's Manual*. Information about drivers (e.g. VGA & audio) is also found in *User's Manual*. That manual is shipped with the computer.

Operating systems (e.g. *Windows 8*, etc.) have their own manuals as do application software (e.g. word processing and database programs). If you have questions about those programs, you should consult those manuals.

The *P375SM/P375SMF* series notebook is designed to be upgradeable. See *Disassembly on page 2 - 1* for a detailed description of the upgrade procedures for each specific component. Please note the warning and safety information indicated by the “” symbol.

The balance of this chapter reviews the computer's technical specifications and features.

Chapter 2: Disassembly

Overview

This chapter provides step-by-step instructions for disassembling the *P375SM/P375SMF* series notebook's parts and subsystems. When it comes to reassembly, reverse the procedures (unless otherwise indicated).

We suggest you completely review any procedure before you take the computer apart.

Procedures such as upgrading/replacing the RAM, optical device and hard disk are included in the User's Manual but are repeated here for your convenience.

To make the disassembly process easier each section may have a box in the page margin. Information contained under the figure # will give a synopsis of the sequence of procedures involved in the disassembly procedure. A box with a  lists the relevant parts you will have after the disassembly process is complete. **Note:** The parts listed will be for the disassembly procedure listed ONLY, and not any previous disassembly step(s) required. Refer to the part list for the previous disassembly procedure. The amount of screws you should be left with will be listed here also.

A box with a  will also provide any possible helpful information. A box with a  contains warnings.

An example of these types of boxes are shown in the sidebar.

Disassembly

NOTE: All disassembly procedures assume that the system is turned **OFF**, and disconnected from any power supply (the battery is removed too).

Maintenance Tools

The following tools are recommended when working on the notebook PC:

- M3 Philips-head screwdriver
- M2.5 Philips-head screwdriver (magnetized)
- M2 Philips-head screwdriver
- Small flat-head screwdriver
- Pair of needle-nose pliers
- Anti-static wrist-strap

Connections

Connections within the computer are one of four types:

Locking collar sockets for ribbon connectors	To release these connectors, use a small flat-head screwdriver to gently pry the locking collar away from its base. When replacing the connection, make sure the connector is oriented in the same way. The pin1 side is usually not indicated.
Pressure sockets for multi-wire connectors	To release this connector type, grasp it at its head and gently rock it from side to side as you pull it out. Do not pull on the wires themselves. When replacing the connection, do not try to force it. The socket only fits one way.
Pressure sockets for ribbon connectors	To release these connectors, use a small pair of needle-nose pliers to gently lift the connector away from its socket. When replacing the connection, make sure the connector is oriented in the same way. The pin1 side is usually not indicated.
Board-to-board or multi-pin sockets	To separate the boards, gently rock them from side to side as you pull them apart. If the connection is very tight, use a small flat-head screwdriver - use just enough force to start.

Maintenance Precautions

The following precautions are a reminder. To avoid personal injury or damage to the computer while performing a removal and/or replacement job, take the following precautions:

1. **Don't drop it.** Perform your repairs and/or upgrades on a stable surface. If the computer falls, the case and other components could be damaged.
2. **Don't overheat it.** Note the proximity of any heating elements. Keep the computer out of direct sunlight.
3. **Avoid interference.** Note the proximity of any high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage components and/or data. You should also monitor the position of magnetized tools (i.e. screwdrivers).
4. **Keep it dry.** This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.
5. **Be careful with power.** Avoid accidental shocks, discharges or explosions.
 - Before removing or servicing any part from the computer, turn the computer off and detach any power supplies.
 - When you want to unplug the power cord or any cable/wire, be sure to disconnect it by the plug head. Do not pull on the wire.
6. **Peripherals** – Turn off and detach any peripherals.
7. **Beware of static discharge.** ICs, such as the CPU and main support chips, are vulnerable to static electricity. Before handling any part in the computer, discharge any static electricity inside the computer. When handling a printed circuit board, do not use gloves or other materials which allow static electricity buildup. We suggest that you use an anti-static wrist strap instead.
8. **Beware of corrosion.** As you perform your job, avoid touching any connector leads. Even the cleanest hands produce oils which can attract corrosive elements.
9. **Keep your work environment clean.** Tobacco smoke, dust or other air-borne particulate matter is often attracted to charged surfaces, reducing performance.
10. **Keep track of the components.** When removing or replacing any part, be careful not to leave small parts, such as screws, loose inside the computer.

Cleaning

Do not apply cleaner directly to the computer, use a soft clean cloth.

Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Power Safety Warning

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines). It is advisable to also remove your battery in order to prevent accidentally turning the machine on.

Disassembly Steps

The following table lists the disassembly steps, and on which page to find the related information. **PLEASE PERFORM THE DISASSEMBLY STEPS IN THE ORDER INDICATED.**

To remove the Battery:

1. Remove the battery [page 2 - 5](#)

To remove the Optical Device:

1. Remove the battery [page 2 - 5](#)
2. Remove the Optical device [page 2 - 6](#)

To remove the HDD:

1. Remove the battery [page 2 - 5](#)
2. Remove the HDD [page 2 - 7](#)

To remove the Keyboard:

1. Remove the battery [page 2 - 5](#)
2. Remove the keyboard [page 2 - 11](#)

To remove the System Memory:

1. Remove the battery [page 2 - 5](#)
2. Remove the system memory [page 2 - 13](#)

To remove and install the Processor:

1. Remove the battery [page 2 - 5](#)
2. Remove the processor [page 2 - 16](#)
3. Install the processor [page 2 - 18](#)

To remove the VGA card:

1. Remove the battery [page 2 - 5](#)
2. Remove the VGA card [page 2 - 19](#)
3. Install the VGA card [page 2 - 23](#)

To remove the Wireless LAN Module:

1. Remove the battery [page 2 - 5](#)
2. Remove the Keyboard [page 2 - 11](#)
3. Remove the Wireless LAN [page 2 - 27](#)

To remove the Speaker Module:

1. Remove the battery [page 2 - 5](#)
2. Remove the Keyboard [page 2 - 11](#)
3. Remove the system memory [page 2 - 13](#)
4. Remove the processor [page 2 - 16](#)
5. Remove the VGA card [page 2 - 19](#)
6. Remove the Wireless LAN [page 2 - 27](#)
7. Remove the Speaker [page 2 - 28](#)

To remove the Volume Board Module:

1. Remove the battery [page 2 - 5](#)
2. Remove the Keyboard [page 2 - 11](#)
3. Remove the system memory [page 2 - 13](#)
4. Remove the processor [page 2 - 16](#)
5. Remove the VGA card [page 2 - 19](#)
6. Remove the Wireless LAN [page 2 - 27](#)
7. Remove the Speaker [page 2 - 28](#)
8. Remove the Volume Board [page 2 - 29](#)

Removing the Battery

If you are confident in undertaking upgrade procedures yourself, for safety reasons it is best to remove the battery.

1. Turn the computer off, remove the AC/DC adapter and turn it over.
2. Slide the latch **1** - **2** in the direction of the arrow.
3. Slide the battery forward in the direction of the arrow on the battery **3** until the markers on the battery and case align **4**.
4. Lift the battery **5** up (*Figure b*) and out of the battery bay.

Figure 1
Battery Removal

- a. Slide the latch and hold it in place.
- b. Slide the battery in the direction of the arrow.
- c. Lift the battery out of the bay as indicated.

Disassembly

Figure 2
**Optical Device
 Removal**

- Remove the screws.
- Remove the cover.
- Remove the screw.
- Push the optical device out of the computer.

Removing the Optical (CD/DVD) Device

- Turn off the computer, and turn it over and remove the battery ([page 2 - 5](#)).
- Locate the hard disk bay cover and remove screws **1** - **2**, and remove the bay cover **3**.
- Remove the screw at point **4**, and use a screwdriver to carefully push out the optical device at point **5**.
- Push the optical device drive **6** out of the bay and reverse the process to install the new device.

- 3. Hard Disk Bay Cover
- 6. Optical Device
- 3 Screws

Blu-Ray Device Bezel Removal

Note that some Blu-Ray modules (e.g. Pioneer) have a small piece of mylar inserted in the left side (as viewed front on) of the bezel cover; in order to prevent the bezel cover of the module from being removed accidentally. If you need to replace the bezel cover, you will need to use a screwdriver to ease out and remove the mylar before attempting to remove the bezel cover. You will need to re-insert the mylar when replacing the bezel cover.

Removing the Hard Disk Drive

The hard disk drive is mounted in a removable case and can be taken out to accommodate other 2.5" SATA hard disk drives with a height of 9.5mm (h). Follow your operating system's installation instructions, and install all necessary drivers and utilities (as outlined in **Chapter 4 of the User's Manual**) when setting up a new hard disk.

Hard Disk Upgrade Process

1. Turn off the computer, and turn it over and remove the battery ([page 2 - 5](#)).
2. Locate the Hard disk bay cover and remove the screw **1**.
3. Slide the bay cover **3** until the case markers **2** align.
4. Carefully lift the bay cover **3** off the computer ([Figure 3c](#)).

Figure 3
HDD Assembly Removal

- a. Remove the screw.

13. Hard Disk

- 6 Screws

Removing the Hard Disk(s) in the Secondary HDD Bay

1. Turn **off** the computer, and turn it over and remove the battery and any HDD in the upper slot.
2. The secondary hard disk bay is located under the first hard disk.
3. Grip the tab and raise the hard disk assembly up at an angle **1** as illustrated (*Figure 5a*).
4. Lift the hard disk assembly **2** out of the compartment.
5. Remove the screws **3** - **6** to release the hard disk **8** from the case **7** (*Figure 5b*).
6. Reverse the process to install any new hard disk(s).

Figure 5
**Secondary HDD
Assembly Removal**

- a. Lift the secondary hard disk assembly out off the computer.

Hard Disk Size Note (Foam Rubber Insert)

Note that the hard disks pictured on the following pages are all 9.5mm(H) hard disk drives. In some cases 7mm(H) hard disk drives will be installed. For more information contact your distributor/supplier, and bear in mind your warranty terms.

Figure 6
Foam Rubber
Insert for 7mm(H)
HDDs

- If you are replacing a 9.5mm(H) HDD with a 7mm(H) HDD then insert the foam rubber insert (as shown above).
- If you are replacing a 7mm(H) HDD with a 9.5mm(H) HDD then remove the foam rubber insert.

Removing the Keyboard

1. Turn off the computer, and turn it over and remove the battery ([page 2 - 5](#)).
2. Turn the computer over, open the Lid/LCD, and carefully unsnap the center cover module **1** from point **2** (between F11 & F12) using non-metallic instrument.
3. Lift up the center cover module **1**.
4. Remove screws **3** - **7** from the keyboard.
5. Carefully lift the keyboard **8** up, being careful not to bend the keyboard ribbon cable.
6. Disconnect the keyboard ribbon cable **9** from the locking collar socket **10**, and the keyboard LED cable **11** from its locking collar socket **12**.
7. Remove the keyboard **8**.
8. Reverse the process to replace the keyboard (make sure to reconnect the keyboard cable).

Figure 7
Keyboard
Removal

- a. Open the lid/LCD and unsnap the LED cover at point 2.
- b. Lift the LED cover module and remove the screws from the keyboard.
- c. Disconnect the cables from the locking collar.
- d. Remove the keyboard.

- 1. Center Cover Module
- 8. Keyboard
- 5 Screws

Disassembly

Figure 8
Keyboard Removal
(cont'd.)

- e. Disconnect the cable from the locking collar.
 f. Remove the keyboard.
 g. Push the center cover on the left side and the slide toward the right to secure it in place.

9. Remove the keyboard **15**, and screws **16** - **18** from the keyboard shielding plate.

Re-Inserting the Keyboard

When re-inserting the keyboard firstly align the **five** keyboard tabs at the bottom (*Figure 8f*) at the bottom of the keyboard with the slots in the case.

10. Reverse the process to replace the keyboard (make sure to reconnect the keyboard cable).
 11. Push the center cover module down on the left side at point **19**, and then slide the module to the right (as illustrated) and snap down to secure it in place.
 12. Replace the screws on the bottom of the computer.

 15. Keyboard

- 3 Screws

Removing the System Memory (RAM)

The computer has three memory sockets for 204 pin Small Outline Dual In-line Memory Modules (SO-DIMM) DDR III (DDR3) supporting 1600 MHz. The main memory can be expanded up to 32GB. The total memory size is automatically detected by the POST routine once you turn on your computer.

Primary System Memory Upgrade Process

1. Turn off the computer, and turn it over to remove the battery ([page 2 - 5](#)).
2. Remove screws **1** - **4** and slide the component bay cover until the cover and case indicators **5** are aligned.
3. Remove the component bay cover **6**.
4. The RAM module will be visible at point **7** on the mainboard ([Figure 9c](#)).

Figure 9
RAM-1 Module Removal

- a. Remove screws and slide the component bay cover as indicated.
- b. Remove the component bay cover.
- c. Locate the module.

Contact Warning

Be careful not to touch the metal pins on the module's connecting edge. Even the cleanest hands have oils which can attract particles, and degrade the module's performance.

6. Component Bay Cover

- 4 Screws

Disassembly

Figure 10
RAM-1 Module
Removal (cont'd.)

- d. Gently pull the release latch in the direction indicated.
- e. Remove the module.

5. Gently pull the two **release latches 8 & 9** on the sides of the memory socket in the direction indicated by the arrows (**Figure 10d**).
6. The RAM module **10** will pop-up, and you can then remove it.
7. Pull the latches to release the second module if necessary

d.

e.

8. Insert a new module holding it at about a 30° angle and fit the connectors firmly into the memory slot.
9. The module's pin alignment will allow it to only fit one way. Make sure the module is seated as far into the socket as it will go. **DO NOT FORCE** the module; it should fit without much pressure.
10. Press the module in and down towards the mainboard until the slot levers click into place to secure the module.
11. Replace the component bay cover and screws.
12. Restart the computer to allow the BIOS to register the new memory configuration as it starts up.

10. RAM Module

Secondary System Memory Upgrade Process

1. Turn off the computer, and turn it over to remove the battery ([page 2 - 5](#)), and keyboard ([page 2 - 11](#)).
2. The RAM module will be visible at point **1** on the mainboard ([Figure 11a](#)).

3. Gently pull the two **release latches 2 & 3** on the sides of the memory socket in the direction indicated by the arrows ([Figure 10c](#)).
4. The RAM module **4** will pop-up, and you can then remove it.
5. Pull the latches to release the second module if necessary
6. Insert a new module holding it at about a 30° angle and fit the connectors firmly into the memory slot.
7. The module's pin alignment will allow it to only fit one way. Make sure the module is seated as far into the socket as it will go. **DO NOT FORCE** the module; it should fit without much pressure.
8. Press the module in and down towards the mainboard until the slot levers click into place to secure the module.
9. Replace the screws and keyboard.
10. Restart the computer to allow the BIOS to register the new memory configuration as it starts up.

Figure 11
RAM-2 Module Removal

- a. Locate the module.
- b. Gently pull the release latch in the direction indicated.
- c. Remove the module.

Contact Warning

Be careful not to touch the metal pins on the module's connecting edge. Even the cleanest hands have oils which can attract particles, and degrade the module's performance.

4. RAM Module

Disassembly

Figure 12
Processor Removal

- Locate the heat sink.
- Remove the CPU fan cables and screws. Lift up the CPU fan off the computer.
- Remove the screws.
- Remove the heat sink.

Removing and Installing the Processor

Processor Removal Procedure

- Turn off the computer, and turn it over to remove the battery ([page 2 - 5](#)), and component bay cover ([page 2 - 13](#)).
- The heat sink fan and heat sink will be visible at point **A** on the mainboard.
- Carefully disconnect heat sink fan cable **B**, and remove screws **C** - **E** ([Figure 12b](#)).
- Lift up the heat sink fan **F** off the computer.
- Remove screws **4**, **3**, **2**, **1**, the reverse order indicated on the label ([Figure 12c](#)) and carefully pull the tabs **G** to disconnect the heat sink.
- Carefully (it may be hot) lift up the heat sink **H** off the computer ([Figure 12d](#)).

Caution

The heat sink, and CPU area in general, contains parts which are subject to high temperatures. Allow the area time to cool before removing these parts.

F. Heat Sink Fan
H. Heat Sink

- 7 Screws

- Turn the release latch **7** (towards the unlock symbol , to release the CPU (*Figure 13e*).
- Carefully (it may be hot) lift the CPU **8** up out of the socket (*Figure 13e*).
- See [page 2 - 18](#) for information on inserting a new CPU.
- When re-inserting the CPU, pay careful attention to the pin alignment, it will fit only one way (DO NOT FORCE IT).

Figure 13
Processor Removal
(cont'd)

- Turn the release latch to unlock the CPU.
- Lift the CPU out of the socket.

Caution

The heat sink, and CPU area in general, contains parts which are subject to high temperatures. Allow the area time to cool before removing these parts.

8. CPU

Disassembly

Figure 14
Processor
Installation

- Insert the CPU.
- Turn the release latch towards the lock symbol as indicated.
- Remove the sticker from the heat sink and Insert the heat sink.
- Tighten the screws.
- Connect the heat sink fan cables and insert the heat sink fan. Tighten the screws.

Processor Installation Procedure

- Insert the CPU **A**, pay careful attention to the pin alignment, it will fit only one way (DO NOT FORCE IT!).
- Turn the release latch **B** towards the lock symbol  as indicated.
- Remove the sticker C** from the heat sink unit (if it is a new unit).
- Insert the heat sink **D** as indicated in *Figure 14c*.
- Tighten the CPU heat sink screws **1**, **2**, **3** & **4** (*Figure 14d*) and connect the CPU fan cables **E** (make sure that the CPU fan cable is tucked underneath the bracket **G**).
- Insert heat sink fan **F** and tighten the screws **H** - **J** (*Figure 14e*).
- Replace the component bay cover and tighten the screws (*page 2 - 16*).

- A. CPU
- D. Heat Sink
- F. Heat Sink Fan

- 7 Screws

Note:

Tighten the screws in the order 1-2-3-4 as indicated on the label.

Removing the VGA-1 Card

1. Turn off the computer, and turn it over to remove the battery ([page 2 - 5](#)) and component bay cover ([page 2 - 5](#)).
2. The VGA-1 card will be visible at point **1** on the mainboard ([Figure 15a](#)).
3. Remove screws **2** - **5** and **6** - **8** from the heat sink **in the order indicated on the label** (and on the heat sink unit itself).
4. Carefully (**they may be hot**) remove the heat sink-1 **9** from VGA assembly.
5. Carefully (**they may be hot**) remove the heat sink-2 **10** from VGA assembly.

Figure 15
VGA-1 Card Removal

- a. Locate the VGA card.
- b. Remove the screws and VGA heat sink-1.
- c. Remove the screws and VGA heat sink-2.

Heat Sink Screw Removal and Insertion

Remove the screws from the heat sink in the order indicated here: **7-6-5-4-3-2-1**.

When tightening the screws, make sure that they are tightened in the order: **1-2-3-4-5-6-7**.

Caution

The heat sink, and video card area in general, contains parts which are subject to high temperatures. Allow the area time to cool before removing these parts.

9. VGA Heat sink-1
10. VGA Heat sink-2

- 7 Screws

Disassembly

Figure 16 VGA-1 Card Removal (cont'd)

- d. Remove the screws and disconnect the VGA cable if applicable.
e. Lift the VGA-1 card out.

6. Remove screws 11 & 12 from the VGA-1 assembly.
7. If your system includes two video cards you will need to disconnect the cable 13 between the master and slave cards (do not forget to reconnect the cable if you are replacing two cards).
8. Carefully lift the VGA-1 card 14 off the mainboard.

NVidia VGA Cable

AMD VGA Cable

- 
- 13. VGA Cable
 - 14. VGA-2 Card

- 2 Screws

Removing the VGA-2 Card

1. Turn off the computer, and turn it over to remove the battery ([page 2 - 5](#)), component bay cover ([page 2 - 13](#)) and CPU ([page 2 - 16](#)).
2. The VGA-2 card will be visible at point **1** on the mainboard ([Figure 17a](#)).
3. Remove screws **2** - **8** from the heat sink **in the order indicated on the label** (and on the heat sink unit itself).
4. Carefully (**it may be hot**) remove the VGA heat sink **9**.

Figure 17
VGA-2 Card Removal

- a. Remove the screws.
- b. Remove the VGA heat sink.

Heat Sink Screw Removal and Insertion

Remove the screws from the heat sink in the order indicated here: **7-6-5-4-3-2-1**.

When tightening the screws, make sure that they are tightened in the order: **1-2-3-4-5-6-7**.

Caution

The heat sink, and video card area in general, contains parts which are subject to high temperatures. Allow the area time to cool before removing these parts.

9. VGA Heat sink

- 7 Screws

Disassembly

Figure 18 VGA-2 Card Removal (cont'd)

- c. Remove the screws and disconnect the VGA cable.
- d. Lift the VGA-2 card out.

5. Remove screws **10** & **11** from the VGA-1 assembly.
6. Disconnect the VGA cable **12** between the master and slave cards (do not forget to reconnect the cable if you are replacing two cards).
7. Carefully lift the VGA-2 card **13** off the mainboard.

NVidia VGA Cable

AMD VGA Cable

12. VGA Cable
13. VGA-2 Card

- 2 Screws

Installing the VGA-1 Card

1. Do not forget to replace the master and slave cable if you are replacing two video cards.
2. Prepare to fit the VGA card **1** into the slot by holding it at about a 30° angle.
3. The card needs to be fully into the slot, and the VGA card and socket have a guide-key and pin which align to allow the card to fit securely. Fit the connectors firmly into the socket, straight and evenly.
4. DO NOT attempt to push one end of the card in ahead of the other.
5. The card's pin alignment will allow it to only fit one way. **Make sure the module is seated as far into the socket as it will go** (none of the gold colored contact should be showing). DO NOT FORCE the card; it should fit without much pressure.
6. Replace the master and slave cable **2** by connecting it to the two VGA cards (if applicable).
7. Secure the card with screws **3** & **4**.

Figure 19
**VGA-1 Card
Installation**

- a. Carefully Insert the VGA Card.
- b. Tighten the screws.

1. VGA-1 card Module

Disassembly

Figure 20 VGA-1 Card Installation (cont'd)

- c. Remove the sticker from the heat sink-2 and Insert the VGA heat sink-2.
- d. Remove the sticker from the heat sink-1 and Insert the VGA heat sink-1.
- e. Tighten the screws.

8. Remove the sticker **5** from the heat sink (*Figure 20c*).
9. Hold the VGA heatsink-2 **6** by the tab and insert it back on the card (*page 2 - 21*).
10. Remove the sticker **10** from the heat sink (*Figure 20d*).
11. Hold the VGA heatsink-1 **11** by the tab and insert it back on the card and
12. Secure screws **9** - **15** in the order indicated in (*page 2 - 21*).
13. Reinsert the component bay cover, and secure with the screws as indicated in (*page 2 - 13*).

Heat Sink Screw Removal and Insertion

Remove the screws from the heat sink in the order indicated here: 7-6-5-4-3-2-1.

When tightening the screws, make sure that they are tightened in the order: 1-2-3-4-5-6-7.

6. VGA Heat sink-2
11. VGA Heat sink-1

- 7 Screws

Installing the VGA-2 Card

1. Connect the master and slave cable **2** to the two VGA cards before preparing to fit the VGA-2 card **1** into the slot by holding it at about a 30° angle.
2. The card needs to be fully into the slot, and the VGA card and socket have a guide-key and pin which align to allow the card to fit securely.
3. Fit the connectors firmly into the socket, straight and evenly.
4. DO NOT attempt to push one end of the card in ahead of the other.
5. The card's pin alignment will allow it to only fit one way. **Make sure the module is seated as far into the socket as it will go** (none of the gold colored contact should be showing). DO NOT FORCE the card; it should fit without much pressure.
6. Secure the card with screws **3** & **4** (*Figure 21b*).

Appendix A: Part Lists

This appendix breaks down the *P375SM/P375SMF* series notebook's construction into a series of illustrations. The component part numbers are indicated in the tables opposite the drawings.

Note: This section indicates the *manufacturer's* part numbers. Your organization may use a different system, so be sure to cross-check any relevant documentation.

Note: Some assemblies may have parts in common (especially screws). However, the part lists DO NOT indicate the total number of duplicated parts used.

Note: Be sure to check any update notices. The parts shown in these illustrations are appropriate for the system at the time of publication. Over the product life, some parts may be improved or re-configured, resulting in *new* part numbers.

Part List Illustration Location

The following table indicates where to find the appropriate part list illustration.

Appendix C: Updating the FLASH ROM BIOS

To update the FLASH ROM BIOS, you must:

- Download the BIOS update from the web site.
- Unzip the files onto a bootable CD/DVD/USB Flash Drive.
- Reboot your computer from an external CD/DVD/USB Flash Drive.
- Use the flash tools to update the flash BIOS using the commands indicated below.
- Restart the computer booting from the HDD and press **F2** at startup enter the BIOS.
- Load setup defaults from the BIOS and save the default settings and exit the BIOS to restart the computer.
- After rebooting the computer you may restart the computer again and make any required changes to the default BIOS settings.

Download the BIOS

1. Go to www.clevo.com.tw and point to **E-Services** and click **E-Channel**.
2. Use your user ID and password to access the appropriate download area (BIOS), and download the latest BIOS files (the BIOS file will be contained in a batch file that may be run directly once unzipped) for your computer model (see sidebar for important information on BIOS versions).

Unzip the downloaded files to a bootable CD/DVD or USB Flash drive

1. Insert a bootable CD/DVD/USB flash drive into the CD/DVD drive/USB port of the computer containing the downloaded files.
2. Use a tool such as Winzip or Winrar to unzip all the BIOS files and refresh tools to your bootable CD/DVD/USB flash drive (you may need to create a bootable CD/DVD with the files using a 3rd party software).

Set the computer to boot from the external drive

1. With the bootable CD/DVD/USB flash drive containing the BIOS files in your CD/DVD drive/USB port, restart the computer and press **F2** (in most cases) to enter the BIOS.
2. Use the arrow keys to highlight the **Boot** menu.
3. Use the “+” and “-” keys to move boot devices up and down the priority order.
4. Make sure that the CD/DVD drive/USB flash drive is set first in the boot priority of the BIOS.
5. Press **F4** to save any changes you have made and exit the BIOS to restart the computer.

BIOS Version

Make sure you download the latest correct version of the BIOS appropriate for the computer model you are working on.

You should only download BIOS versions that are **V1.01.XX or higher** as appropriate for your computer model.

Note that BIOS versions are not backward compatible and therefore you may not downgrade your BIOS to an older version after upgrading to a later version (e.g if you upgrade a BIOS to ver 1.01.05, you **MAY NOT** then go back and flash the BIOS to ver 1.01.04).

BIOS Update

Use the flash tools to update the BIOS

1. Make sure you are not loading any memory management programs such as HIMEM by holding the **F8** key as you see the message “**Starting MS-DOS**”. You will then be prompted to give “**Y**” or “**N**” responses to the programs being loaded by DOS. Choose “**N**” for any memory management programs.
2. You should now be at the DOS prompt e.g: DISK C:\> (C is the designated drive letter for the CD/DVD drive/USB flash drive).
3. **Type the following command** at the DOS prompt:

C:\> Flash.bat

4. The utility will then proceed to flash the BIOS.
5. You should then be prompted to press any key to restart the system or turn the power off, and then on again but make sure you remove the CD/DVD/USB flash drive from the CD/DVD drive/USB port before the computer restarts.

Restart the computer (booting from the HDD)

1. With the CD/DVD/USB flash drive removed from the CD/DVD drive/USB port the computer should restart from the HDD.
2. Press **F2** as the computer restarts to enter the BIOS.
3. Use the arrow keys to highlight the **Exit** menu.
4. Select **Load Setup Defaults** (or press **F3**) and select “**Yes**” to confirm the selection.
5. Press **F4** to save any changes you have made and exit the BIOS to restart the computer.

Your computer is now running normally with the updated BIOS

You may now enter the BIOS and make any changes you require to the default settings.
